

Customer Registration

Problem Statement:

Modify the given customer registration form that accepts inputs for the following fields.

Different Input fields in customer registration form.	
Fields	Description
User Name	Customer's name. Focus should be placed here on page; must contain only alphabets; can span max upto 15 alphabets
Password	Required data; contains alphanumeric character starting and ending with a digit. Can span between 8 to 12 characters.
Email	Email Validations;
Gender	Use radio buttons to choose only one of the following - Male, Female, Other.
Age	Customer's age. Min value is 12 and max 60.
Address	Use text area with 4 rows and 20 columns; max span 100 characters.
Company website.	URL validations
Choose country	Select from a dropdown list - India, United States, Germany, Japan

Steps to follow:

- Create two buttons - one to submit the form and one to reset the form.
- Run the code using live server and compare the output with given sample output
